Election/Restrictions

1. Applicant timely traversed the restriction (election) requirement in the reply filed on November 10, 2006, and pointed out that treating agent claims are 1-12 and 18-28. However, the examiner submits the species restriction, suggested by an examiner in coating composition class 106, applies to the instantly elected invention.

Election of Species

lubricating components

2. This application contains claims directed to the following patentably distinct species: (lubricating components): plant and animal oils, mineral oils, synthetic oils, sodium stearate, potassium stearate, calcium stearate, aluminum stearate, barium stearate, lithium stearate, zinc stearate, polyethylene wax, PP wax, carnauba wax, beeswax, paraffin wax, PTFEs, H₂O. The species are independent or distinct because, for example, mineral oils and beeswax, etc., are drawn to distinct and separate chemical compositions/species.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, claim is 1 generic.

silicates

3. This application contains claims directed to the following patentably distinct species: (silicates): sodium silicates, ammonium silicates, potassium silicates, lithium silicates. The species are independent or distinct because, sodium silicates and ammonium silicates, etc., are drawn to distinct and separate chemical compositions/species.

Art Unit: 1742

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, claims 1, 4, 18 are generic.

viscosity modifier

4. This application contains claims directed to the following patentably distinct species: (viscosity modifier): hydroxyethylcellulose, carboxymethylcellulose, polyacrylamide, sodium polyacrylate, polyvinylpyrrolidone, polyvinyl alcohol, silica, bentonite, kaolin, synthetic hectorite. The species are independent or distinct because, for example, polyacrylamide, hydroxyethylcellulose, and polyvinyl alcohol, etc., are drawn to distinct and separate chemical compositions/species.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, claims 3, 9, 19, 25 are generic.

5. Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which depend from or otherwise require all the limitations of an allowable generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Art Unit: 1742

6. Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To reserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

Should applicant traverse on the ground that the inventions or species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the inventions or species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C.103(a) of the other invention.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Janelle Combs-Morillo whose telephone number is (571) 272-1240. The examiner can normally be reached on 8:30 am- 6:00 pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Roy King can be reached on (571) 272-1244. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
